

Thimmaiah (Tim) Chowdary

AI FDE Manager, Databricks – AI Automations | Multi-Cloud Expert

AI Automations | Data Intelligence | Gen AI | Thought Leadership

tim.chowdary@gmail.com | +91 96115 15577 | [GitHub](#) | [LinkedIn](#) | [YouTube](#) | [Portfolio](#)

Professional Summary

Enterprise AI Architect and Delivery Leader with 20+ years of experience designing and delivering complex, scalable solutions across AI-native applications, full-stack engineering, and large-scale data platforms. At Databricks, leading end-to-end architecture and delivery of multi-agent AI frameworks, embedding AI-first principles into every stage of the delivery lifecycle. Proven expertise in agentic orchestration, LLM integration, RAG architectures, and cloud-native design across AWS, Azure, and multi-cloud environments. Trusted client advisor and technical solutioning partner—translating complex business requirements into scalable, governed AI architectures with embedded observability, responsible AI governance, and DevSecOps guardrails. Active thought leader and content creator; mentor at engineering colleges.

Professional Experience

Databricks, FDE Delivery Manager, AI Automations

Bangalore, India Jan 2024 – Present

- Architected and led end-to-end delivery of an AI-driven multi-agent migration framework (DADDD methodology), embedding AI-first principles across discovery, design, development, and deployment phases—enabling automated analysis, planning, code conversion, validation, and lineage capture for enterprise data modernisation programs.
- Designed agentic AI systems with multi-agent orchestration, LLM reasoning (Claude), reflection patterns, and human-in-the-loop controls; applied Responsible AI principles—governance, observability, and cost/performance optimisation—across all production deployments.
- Developed custom AI agent skills for workflow orchestration, contextual reasoning, tool invocation, and autonomous task execution; integrated RAG architectures with vector search for enterprise knowledge grounding.
- Improved delivery consistency by 40% by institutionalising engineering guardrails—quality gates, automated validation, audit-ready metadata pipelines—across multiple client engagements.
- Served as technical point of contact for enterprise clients; translated business requirements into scalable AI architectures and supported pre-sales solutioning with estimations, proof-of-concepts, and technical proposals.
- Developed generative AI assistants and scoping accelerators, reducing manual engineering effort and accelerating time-to-value; evangelised AI-native delivery vision across engineering, field teams, and customer stakeholders.

Amazon, Data Engineering & SDE Manager

Bangalore, India Oct 2015 – Dec 2023

- Led cross-functional data engineering, SDE, and BI teams delivering enterprise-scale analytics platforms for Amazon's global seller ecosystem; owned technical roadmap, architecture decisions, and delivery milestones across multi-year programmes.
- Designed and owned full-stack data and application architecture using Redshift, EMR, Step Functions, and Lambda; applied microservices and event-driven patterns to improve reliability, scalability, and operational resilience.
- Implemented ML-based seller demand forecasting (Random Forest) improving planning efficiency; established MLOps practices for model lifecycle management and production monitoring.
- Championed CI/CD and DevOps adoption—automated build, test, and deployment pipelines—reducing release cycles and embedding DevSecOps practices across engineering teams.
- Mentored and grew high-performing engineering teams; established coding standards, architecture review processes, and pipeline development best practices across multiple squads.

TCS, HCL Technologies, iGATE

Bangalore & UK | Sep 2005 – Sep 2015

- Delivered enterprise consulting and end-to-end solution delivery across UK and India for clients in finance, retail, and manufacturing—acting as technical lead, architect, and client liaison on complex, multi-disciplinary engagements.
- Designed and developed full-stack applications using Java, .NET, JavaScript, and enterprise middleware; applied domain-driven design, API-first principles, and clean architecture patterns to build scalable, maintainable systems.
- Led Agile/Scrum adoption and DevOps enablement across delivery teams; established CI/CD pipelines, automated testing frameworks, and engineering quality guardrails.
- Managed senior stakeholder relationships across client organisations, translating business goals into technical architecture and delivery plans with clear milestones and risk mitigation.

Key Projects & Achievements

DADDD *Multi-Agent Legacy-to-Databricks Migration Framework*

- Legacy platforms (Teradata, Oracle, SQL Server, Hadoop, Snowflake) have fragmented pipelines, weak governance, and rising costs; manual migrations are slow, error-prone, and inconsistent—leaving teams unable to scale for AI/ML workloads with months of planning and data-loss risk.
- Delivered 3–5x faster migrations with ~60% cost reduction via automated conversion and validation; 99.9% data accuracy through multi-stage reconciliation; 100% audit trail across all phases.
- Designed five specialized AI agents (Discovery → Assessment → Design → Development → Delivery) orchestrated via LangGraph with feedback loops; hybrid LLM strategy — GPT-5/GPT-4o for planning, Claude for complex code conversion, Databricks Assistant for platform-native validation; reflection, reflexion, and AI-judge evaluation patterns; automated medallion/Unity Catalog architecture blueprints.
- Tech: Python, LangGraph, LangChain, GPT-5/GPT-4o, Claude (Anthropic), Databricks SDK & AI Functions, LangSmith/MLflow, AST/SQL parsers, Vector Store (Chroma/Pinecone), Unity Catalog.

Elite Hire *AI-Powered Smart Hiring Platform*

- Hiring teams are buried in manual sourcing, screening, and scheduling that doesn't scale as requisitions grow; inconsistent review and long coordination cycles mean most resumes never get a fair look and top candidates accept elsewhere before decisions are made.
- Delivered 10x faster hiring, 95% match accuracy, and 40% fewer interview cycles; platform processes 1,000+ applications/day with full audit trail and human-in-the-loop governance.
- Built a multi-agent AI system covering resume parsing, skill extraction, job matching, and scheduling with observability and responsible AI guardrails embedded throughout.
- Tech: Databricks Unity Catalog, Mosaic AI, LangChain, Vector Search, ChromaDB, Delta Lake, Python.

Scopilot *AI-Driven Cloud Migration Intelligence Platform*

- Led the design and development of Scopilot, an AI-powered migration scoping and sizing platform that modernized legacy estimation methodologies by automating analysis of code complexity, object inventory, data volumes, upstream/downstream dependencies, and user ecosystem inputs.
- Built an intelligent assessment framework leveraging AI-driven repository scanning and metadata analysis across GitHub codebases to generate accurate migration sizing, effort estimation, dependency mapping, and implementation planning reports, significantly reducing manual assessment effort and improving estimation consistency.
- Enabled data and warehouse migration teams to accelerate project discovery and planning through automated insights, risk identification, and scalable project estimation capabilities, improving delivery predictability for enterprise migration engagements within the Databricks ecosystem.

Technical Skills & Expertise

AI & Machine Learning	Cloud & Infrastructure	Engineering & Delivery
• Generative AI & LLMs	• Databricks Platform	• Python, JavaScript, Node.js, React
• Multi-Agent AI Systems	• Delta Lake & Unity Catalog	• Solution & Data Architecture
• LangChain & LangGraph	• Apache Spark & PySpark	• CI/CD, GitHub Actions, Azure DevOps
• Mosaic AI (Databricks)	• AWS (Redshift, EMR, S3, Lambda)	• Terraform & IaC
• Vector Search & RAG	• Azure (OpenAI, AI Services, ADF)	• Observability & TDD
• Model Context Protocol	• Multi-Cloud Architecture	• DevSecOps & Quality Gates
• Prompt Engineering	• Data Lakehouse Design	• Technical Team Leadership
• Responsible AI & MLOps	• Microservices & Event-Driven Systems	• Pre-Sales Solutioning & Stakeholder Mgt
